

SETTING UP A 9705F3 FOUNTAIN

1) Set your 6027H Basin on your chosen area after ensuring the location is firm and level. Rotate the Basin until the small opening at the bottom edge is closest to your electrical supply.

2) Preassemble components of the 4027A fountain top. Attach the tube to the barb under the AB870 Light. Then from the top, pass the tube and the light power cord together down through the opening in the top of the 4027A. Allow the light ring to sit snug in the recess on top of the concrete piece.

3) Slip the Restrictor onto the tube, tightening it just enough to stay in place just below the 4027A. Set the 4027A down for the moment.

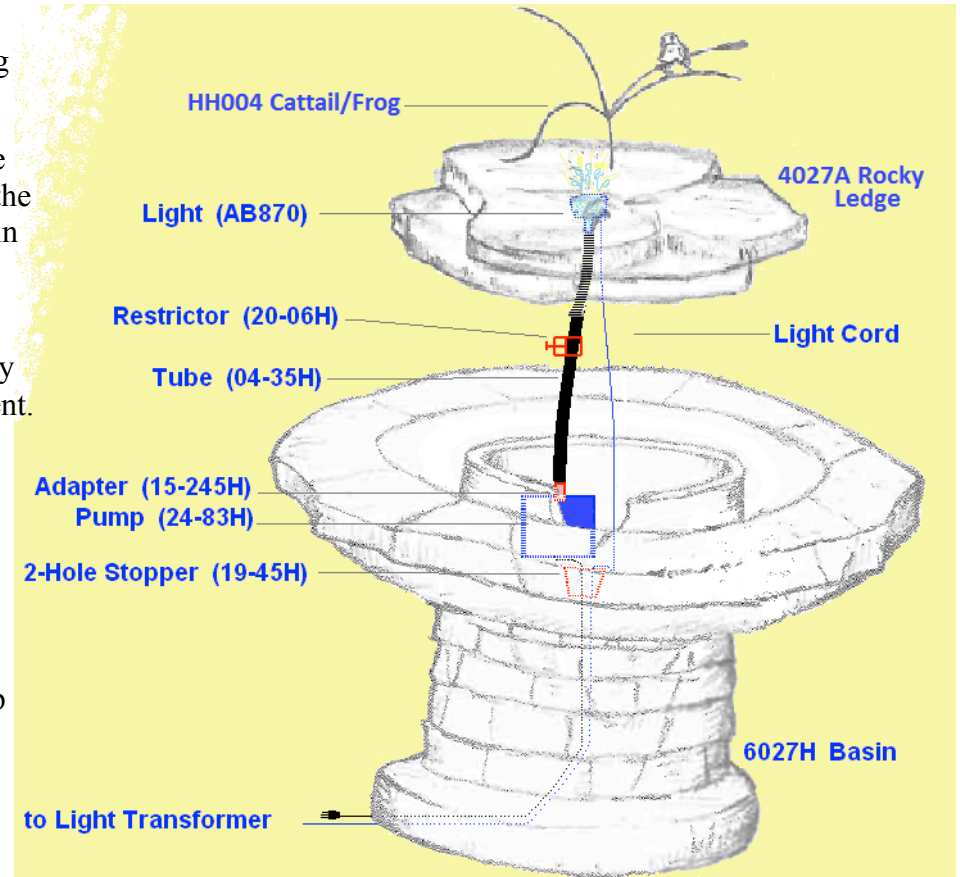

4) Thread the barbed adapter into the pump. Push the pump with its adapter into the other end of the tube.

5) Install the rubber stopper around the pump cord (use the larger hole) about 10" below the pump. Place the cord (smaller hole) in the stopper where the cord is about three feet from the light.

6) Rest the 4027A on the 6027H (with some padding, like a burlap bag in between). The pump should settle in the lower, center part of the basin and the two power cords should be slipped down through the hole in the center of the basin. Reach under the basin piece and pull the cords out the small opening at the bottom.

7) Reaching back into the lower, center part of the basin, push the stopper into the center hole until it is tight, leaving about 1/8" showing above the hole.

8) Remove the padding and set the 4027A on the 6027H. Fill the basin with water, read your pump and light instructions, and plug both units into a GFCI outlet. Attach the cattail / frog feature as shown and enjoy your new fountain.

IMPORTANT – WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- * Disconnect power to pumps and lights.
- * Remove plugs / stopper in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.
- * Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.
- * Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers, as these may damage concrete.
